PROFILE SUMMARY

AI/ML Engineering student specialising in end-to-end deep learning systems, natural language processing, and retrieval-augmented generation (RAG). Experienced in building production-grade pipelines — from data preprocessing and model training to Flask deployment — using PyTorch, TensorFlow, LangChain, and Hugging Face. Seeking roles that apply LLM tooling, NLP, and agentic AI to solve real-world problems.

EDUCATION

B.E. Computer Science — AI Specialization · Bennett University, Greater Noida Exp. July 2027 | CGPA: 7.17/10

TECHNICAL SKILLS

Programming: Python, C++

Skills: DSA, Software Engineering, Artificial Intelligence, DBMS

ML & Deep Learning: Supervised/Unsupervised Learning, CNNs, RNNs (LSTM, GRU, BiGRU), NLP, Computer Vision, MLOps, Fine-tuning, GANs

LLM & NLP Tools: LangChain, Hugging Face Transformers, Prompt Engineering, RAG, Agentic AI, NLTK, GloVe, FAISS, ChromaDB

Frameworks & Libraries: PyTorch, TensorFlow, Scikit-Learn, Pandas, NumPy, MLflow, FastAPI, Flask, Django

Databases: MySQL, MongoDB, Vector DBs (FAISS, ChromaDB)

Deployment & DevOps: Docker, Git, DVC, CI/CD, REST APIs

WORK EXPERIENCE

Intern — *Edu-net Foundation (Virtual Internship)* Jun 2024 – Jul 2024

- Built an automated data validation and auditing tool that scans uploaded datasets to detect missing values, duplicates, outliers, and schema inconsistencies, generating a structured quality report with actionable fix recommendations via a Streamlit dashboard — reducing manual data review effort and ensuring accuracy before downstream analysis.
- Documented model experiments and results to understand performance trade-offs across different architectures.
- Explored the end-to-end ML lifecycle — data preprocessing, model training, evaluation, and deployment concepts using IBM AI tools.

PROJECTS

Chat-With-Documents: RAG Pipeline · Python · Flask · FAISS · HuggingFace [GitHub ↗](#) Mar 2026

- Built a production-grade RAG pipeline with FAISS and custom made pipeline, enabling multi-lingual semantic Q&A over Documents; integrated HuggingFace transformer embeddings and conversation memory to support coherent multi-turn dialogue.
- Engineered a full document preprocessing system (chunking, embedding, indexing for 5+ formats) and a Flask backend with query routing across three modes — Summarize, Q&A — reducing average query latency.

Fake News Detection: NLP Deep Learning · Python · TensorFlow · NLTK · Scikit-Learn [GitHub ↗](#) Dec 2025

- Designed and benchmarked 4 deep learning classifiers (GRU, BiGRU, LSTM, CNN+LSTM) on the WELFake dataset (~72K articles) with full NLP preprocessing — tokenisation, GloVe embeddings, sequence padding — achieving 98%+ accuracy.
- Conducted systematic ablation study across architectures and hyperparameters, documenting precision/recall trade-offs; BiGRU delivered the highest F1 score with the fewest false positives.

Image Colorization: AutoEncoder · Python · TensorFlow · OpenCV · NumPy [GitHub ↗](#) Oct 2025

- Trained an autoencoder in TensorFlow for grayscale-to-colour reconstruction using pixel-wise Lab colour space prediction, evaluated on 1,000+ test images via MSE loss and visual quality analysis.
- Implemented custom data pipelines with OpenCV for Lab colour space conversion and augmentation, improving model generalisation across varied image types and lighting conditions.

CERTIFICATIONS

Machine Learning for All (by University of London) [Certificate ↗](#)

PyTorch: Fundamentals (by deeplearning ai) [Certificate ↗](#)

Retrieval Augmented Generation (RAG) (by deeplearning ai) [Certificate ↗](#)

Database Management Essentials (by University of Colorado System) [Certificate ↗](#)
